Summary

Full-stack MERN developer who has shipped 6 deployed applications – spanning real-time WebSocket systems, a browser-based 3D CAD engine, and Gemini-integrated AI tools – while completing a B.E. in Information Technology. Comfortable owning a feature from API design through production deployment.

Professional Experience

Codec Technologies Pvt. Ltd.

Pune (Remote)

Full Stack Developer Intern

Feb 2026 – Mar 2026

- Reduced client-facing layout inconsistency by architecting a fully responsive MERN portfolio site – measured by 100% layout consistency across mobile and desktop breakpoints during QA – by rebuilding the frontend from scratch in React with Tailwind CSS.
- Improved backend reliability for client-facing requests by engineering REST APIs in Node.js and Express – measured by sub-200ms average response times under test traffic – by implementing structured routing, middleware, and error handling.
- Eliminated failed delivery of user inquiries by integrating automated email forwarding – measured by a zero-fail send rate across testing – by configuring the Nodemailer API with retry-safe request handling.
- Shipped the completed site to production by deploying to Vercel – measured by public accessibility and uptime post-launch – by managing environment configuration and version control via Git/GitHub.

Skills

Core Stack: JavaScript (ES6+), React.js, Next.js, Node.js, Express.js, MongoDB, WebSockets, Three.js/WebGL

Also: C/C++, Python, TypeScript, HTML5/CSS3, Tailwind CSS | Git, GitHub, Vercel, Postman, Oracle Cloud | DSA, OOP | Generative AI (Gemini API), Threat Intelligence, Data Visualization

Projects

SpaceForge 3D | *Next.js, TypeScript, Three.js, WebGL, Tailwind CSS*

[Live Demo](#) | [GitHub](#)

- Engineered an in-browser 3D CAD modeling suite using Three.js/WebGL with interactive Orthographic, Orbit, and First-Person camera viewports and millimeter-scale adaptive grid snapping.
- Built a 2D-to-3D floor plan drafter with wall extrusion and door/window placement, plus a 3D Printing Studio running automated watertight checks and PLA/ABS/PETG filament calculations with slicing-ready STL export.

Auction Engine | *React, Node.js, Express, MongoDB, Redis, Socket.io*

[Live Demo](#) | [GitHub](#)

- Architected a real-time creator auction engine processing zero-latency bids via persistent WebSocket connections, mitigating race conditions and phantom bids with distributed Redis mutex locking.
- Guaranteed financial ledger integrity by wrapping wallet deductions and bid logs in MongoDB ACID transactions with automatic rollback, plus an anti-sniping mechanism extending countdowns 120s on last-second bids.

HoneyBot | *Node.js, Express, React, Socket.io, MongoDB, D3-Geo*

[Live Demo](#) | [GitHub](#)

- Deployed a cloud-based decoy SSH honeypot to capture malicious payloads, brute-force attempts, and credential injection attacks in real time, streaming telemetry to a live D3/SVG world-map dashboard.
- Engineered threat-actor classification heuristics to profile credential-stuffing vs. targeted brute-force attacks and built an attacker-simulation console for injecting custom attack vectors.

WanderX | *Next.js 15, TypeScript, Leaflet, OpenStreetMap*

[Live Demo](#) | [GitHub](#)

- Developed a full-stack expedition planner with a 5-factor algorithmic match score (budget, season, elevation, duration, terrain) and Leaflet/OpenStreetMap route planning with category filtering.
- Built an interactive SVG elevation-profile visualizer with altitude-sickness hazard alerts and a draggable day-by-day itinerary builder with live expense tracking and PDF dossier export.

NexusATS | *Next.js, TypeScript, Clerk, Framer Motion*

[Live Demo](#) | [GitHub](#)

- Built an enterprise-grade job aggregation and ATS pipeline tracker with a fluid Kanban board and a semantic matching engine comparing candidate skill vectors against job listings.
- Integrated Clerk Authentication for multi-tenant auth and session persistence, with a responsive, accessible dark-mode UI and sub-100ms client-side route transitions via Framer Motion.

TalentMatrix AI | *React, Node.js, MongoDB, Google Gemini API*

[Live Demo](#) | [GitHub](#)

- Engineered an automated resume-analysis pipeline using PDF-Parse and Gemini 1.5 Flash to extract structured candidate data and match it against job descriptions in under 2 seconds.
- Built a deterministic ATS scoring algorithm with keyword-gap detection and personalized 90-day upskilling roadmaps, plus a history dashboard with PII masking and MongoDB caching.

Education

JSPM Bhivrabai Sawant Institute of Technology and Research

Pune

Bachelor of Engineering (B.E.) in Information Technology

Aug 2023 – Present

- **Core Coursework:** Object-Oriented Programming (OOP), Computer Network Security (CNS), Data Structures & Algorithms (DSA), Operating Systems (OS), Database Management Systems (DBMS), Software Engineering (SE), Web Tech, IoT.

Certifications

Oracle Cloud Infrastructure Generative AI Certified Foundations Associate – Oracle (2025) | **OCI Foundations Associate** – Oracle

Data Visualization Virtual Experience – Forage (Accenture) | **Cybersecurity Analyst Job Simulation** – Forage (Mastercard)
